ABSTRACT

The family Aphrophoridae consists of over 900 species in the world. Seventy-three species have been recorded from Taiwan, with 50 species (68.5%) considered endemic. The checklist revises the data of geographical distribution, and provides information on type deposition and type localities.

Key words: Homoptera, Cercopoidea, Aphrophoridae, Taiwan, checklist.

Introduction

The family Aphrophoridae was erected by Amyot and Serville in 1843 based on the type genus *Aphrophora* Germar 1821 (Amyot and Serville, 1843). Aphrophoridae contains 2 subfamilies, 8 tribes, and over 900 species in the world at present, of which 62.2% of the species are from the Palearctic and Oriental Regions.

Seventy-eight species of Aphrophoridae were recorded as occurring in Taiwan before 1943 (Metcalf, 1962), among which, 40 species and 9 monotypical genera were published by Matsumura (1903, 1907, 1934, 1938, 1940, 1942a, b), i.e., *Awaphora*, *Macrofukia*, *Mimoptyelus*, *Toroptyelus*, *Jembroides*, *Megagukia*, *Jembrophora*, *Nokophora* and *Kotophora*. Matsumura's monotypical genera, *Awaphora*, *Macrofukia*, *Mimo-*

ptyelus, *Toroptyelus*, and *Jembroides*, were synonymized with related genera or reinstated to the original ones by Liang (1998, 1999).

After a literature review, the checklist contains 1 subfamily, 6 tribes, 17 genera, and 73 Taiwanese aphrophorid species. Fifty of the species in the present checklist are endemic to Taiwan. In this paper, we have tried to organize the information to make it much more complete and clear to facilitate future studies of this group.

The distribution records, synonymes of genus and species are extracted mainly from the original publications of Chou and Liang (1987), Chou et al. (1992), Distant (1908), Jacobi (1904, 1921), Kato (1933a, b), Komatsu (1997), Kwon and Lee (1979), Lee et al. (1976), Liang (1992, 1997, 1999, 2000, 2001), Matsumura (1903, 1907, 1934, 1938, 1940, 1942a, b), Melichar (1903), Metcalf (1962), Metcalf and Horton (1934), Nast (1972), Ossiannilsson (1981), Schmidt (1920), Schumacher (1915a, b), Shih et al. (2000), Shih and Yang (2002), and Walker (1851, 1858). Metcalf (1962), probably based on the articles of Kato (1933a, b), listed Japan and Taiwan as the distributional area of 18 Taiwanese Aphrophoridae species. However, Kato (1933a, b) only listed Taiwan as the distributional area of Taiwanese Aphrophoridae. We, therefore, emended these 18 species as endemic to Taiwan in this checklist, and mark each species name with an asterisk * in the text.

The taxonomic system of this study is based mainly on that of Metcalf (1962). Information of type species for each genus

was cited by authors from Amyot and Serville (1843), Distant (1908), Matsumura (1940, 1942a), Metcalf (1962), Metcalf and Horton (1934), and Stål (1863, 1866). The checklist of all scientific names is arranged in alphabetical sequence by specific epithet. New distributional data are recorded from the TARI (Taiwan Agricultural Research Institute) collection and are indicated in boldface.
